

1.

- a. Paris and Marseilles are both in France
 - i. $\text{In}(\text{Paris} \wedge \text{Marseilles}, \text{France})$: **syntactically invalid**
 - ii. $\text{In}(\text{Paris}, \text{France}) \wedge \text{In}(\text{Marseilles}, \text{France})$: **correct**
 - iii. $\text{In}(\text{Paris}, \text{France}) \vee \text{In}(\text{Marseilles}, \text{France})$: **valid but incorrect**
- b. There is a country that borders both Iraq and Pakistan.
 - i. $\exists c \text{Country}(c) \wedge \text{Border}(c, \text{Iraq}) \wedge \text{Border}(c, \text{Pakistan})$: **correct**
 - ii. $\exists c \text{Country}(c) \Rightarrow [\text{Border}(c, \text{Iraq}) \wedge \text{Border}(c, \text{Pakistan})]$: **valid but incorrect**
 - iii. $[\exists c \text{Country}(c)] \Rightarrow [\text{Border}(c, \text{Iraq}) \wedge \text{Border}(c, \text{Pakistan})]$: **syntactically invalid**
 - iv. $\exists c \text{Border}(\text{Country}(c), \text{Iraq} \wedge \text{Pakistan})$: **syntactically invalid**
- c. All countries that border Ecuador are in South America
 - i. $\forall c \text{Country}(c) \wedge \text{Border}(c, \text{Ecuador}) \Rightarrow \text{In}(c, \text{SouthAmerica})$: **correct**
 - ii. $\forall c \text{Country}(c) \Rightarrow [\text{Border}(c, \text{Ecuador}) \Rightarrow \text{In}(c, \text{SouthAmerica})]$: **correct**
 - iii. $\forall c [\text{Country}(c) \Rightarrow \text{Border}(c, \text{Ecuador})] \Rightarrow \text{In}(c, \text{SouthAmerica})$: **valid but incorrect**
 - iv. $\forall c \text{Country}(c) \wedge \text{Border}(c, \text{Ecuador}) \wedge \text{In}(c, \text{SouthAmerica})$: **valid but incorrect**

2.

- a. $\text{Occupation}(\text{Emily}, \text{surgeon}) \vee \text{Occupation}(\text{Emily}, \text{lawyer})$
- b. $\exists x x \neq \text{actor} \wedge \text{Occupation}(\text{Joe}, \text{actor}) \wedge \text{Occupation}(\text{Joe}, x)$
- c. $\forall x \text{Occupation}(x, \text{surgeon}) \rightarrow \text{Occupation}(x, \text{doctor})$
- d. $\neg \exists x \text{Occupation}(x, \text{lawyer}) \wedge \text{Customer}(\text{Joe}, x)$
- e. $\exists x \text{Boss}(x, \text{Emily}) \wedge \text{Occupation}(x, \text{lawyer})$
- f. $\exists x \forall y \text{Occupation}(x, \text{lawyer}) \wedge \text{Customer}(y, x) \rightarrow \text{Occupation}(y, \text{doctor})$
- g. $\forall x \text{Occupation}(x, \text{surgeon}) \rightarrow \exists y \text{Occupation}(y, \text{lawyer}) \wedge \text{Customer}(x, y)$

3.

- a. KB:
 - $\forall x \text{cat}(x) \rightarrow \text{animal}(x)$
 - $\forall x, y [\text{animal}(x) \wedge \text{afraid}(x, y)] \rightarrow \text{run}(x, y) \vee \text{hide}(x, y)$
 - $\forall x, y \text{cat}(x) \wedge \text{dog}(y) \rightarrow \text{afraid}(x, y)$
 - $\forall x, y \text{cat}(x) \wedge \text{car}(y) \rightarrow \text{afraid}(x, y)$
 - $\text{cat}(\text{Louie})$
 - $\text{dog}(\text{Jake})$
 - $\forall x, y \text{animal}(x) \wedge \text{hide}(x, y) \rightarrow \neg \text{seen}(x)$
 - $\text{seen}(\text{Louie})$
- b. KB in CNF
 - 1: $\neg \text{cat}(x) \vee \text{animal}(x)$
 - 2: $\neg \text{animal}(x) \vee \neg \text{afraid}(x, y) \vee \text{run}(x, y) \vee \text{hide}(x, y)$

3: !cat(x) \vee !dog(y) \vee afraid(x, y)
 4: !cat(x) \vee !car(y) \vee afraid(x, y)
 5: cat(Louie)
 6: dog(Jake)
 7: !animal(x) \vee !hide(x, y) \vee !seen(x)
 8: seen(Louie)

c. Proof:

- i. 1: !run(Louie, Jake)
- ii. 2: 1 + KB2 = !animal(Louie) \vee !afraid(Louie, Jake) \vee hide(Louie, Jake)
- iii. 3: KB1 + KB5 = animal(Louie)
- iv. 4: 2+3 = !afraid(Louie, Jake) \vee hide(Louie, Jake)
- v. 5: KB8+KB7 = !animal(Louie) \vee !hide(Louie, y)
- vi. 6: 5+3 = !hide(Louie, y)
- vii. 7: 6+4 = !afraid(Louie, Jake)
- viii. 8: KB3 + KB5 = !dog(y) \vee afraid(Louie, y)
- ix. 9: 8 + KB6 = afraid(Louie, Jake)
- x. 10: 7 + 9 = []

4.

- a. ?- setof(X,grandchild(X,elizabeth),List).
 List = [beatrice, eugenie, harry, james, louise, peter, william, zara].
- b. ?- setof(X,brotherInLaw(X,diana),List).
 List = [andrew, edward].
- c. ?- setof(X,greatgrandparent(X,zara),List).
 List = [george, mum].
- d. ?- setof(X,ancestor(X,eugenie),List).
 List = [andrew, elizabeth, george, mum, philip, sarah].

5.

- a. Action(Move(loc1,loc2,r),
 Precond: at(loc1) \wedge in(loc1, r) \wedge in(loc2, r)
 Effect: at(loc2) \wedge !at(loc1))
 Action(Push(b,loc1,loc2,r),
 Precond: at(loc1) \wedge box(b) \wedge in(loc1, r) \wedge in(loc2, r) \wedge boxAt(b, loc1)
 Effect: at(loc2) \wedge !at(loc1) \wedge boxAt(b, loc2) \wedge !boxAt(b, loc1))
 Action(TurnOn(s),
 Precond: at(s) \wedge !on(s)
 Effect: on(s))
 Action(TurnOff(s),
 Precond: at(s) \wedge on(s)
 Effect: !on(s))
- b. at(Loc0) \wedge in(Loc0, Room2) \wedge boxAt(Box1, Loc1) \wedge boxAt(Box2, Loc2) \wedge
 boxAt(Box3, Loc3) \wedge in(Loc1, Room1) \wedge in(Loc2, Room1) \wedge in(Loc3, Room3) \wedge
 box(Box1) \wedge box(Box2) \wedge box(Box3) \wedge in(Door1, Room1) \wedge in(Door1, Hall) \wedge

$\text{in}(\text{Door2}, \text{Room2}) \wedge \text{in}(\text{Door2}, \text{Hall}) \wedge \text{in}(\text{Door3}, \text{Room3}) \wedge \text{in}(\text{Door3}, \text{Hall}) \wedge$
 $\text{on}(\text{Light1}) \wedge \text{on}(\text{Light2}) \wedge \text{on}(\text{Light3}) \wedge \text{in}(\text{Light1}, \text{Room1}) \wedge \text{in}(\text{Light2}, \text{Room2}) \wedge$
 $\text{in}(\text{Light3}, \text{Room3})$

- c. $\text{Move}(\text{Loc0}, \text{Door2}, \text{Room2}), \text{Move}(\text{Door2}, \text{Door1}, \text{Hall}), \text{Move}(\text{Door1}, \text{Loc1}, \text{Room1}), \text{Push}(\text{Box1}, \text{Loc1}, \text{Door1}, \text{Room1}), \text{Push}(\text{Box1}, \text{Door1}, \text{Door3}, \text{Hall})$
- d. Maximum branching factor in this case is if all 3 boxes were in Door1, with the robot. This allows the robot to move to other doors, move to Light1, move to Loc1/Loc2, or push any of the 3 boxes to one of these locations for a total of $5\text{locations} * 4\text{options}(\text{alone or with any box}) = 20$.
 - i. This is not purely dependent upon number of boxes and rooms, but also upon locations defined in a room, but the maximum would be with all boxes beginning in the same room and therefore needing locations defined in that room to begin at. This gives said room $m+1$ non-door locations to move to, $k-1$ doors to move to, and m boxes to possibly push, for a total of $((m+1)+(k-1))*(m+1) = (m+k)*(m+1) = (m^2+mk+m+k)$ branches
